

## **Security Standards**

Encrypt any bank, customer, or other confidential information using commercial grade encryption prior to sending email.

Confidential information is data about an individual including name, address, income, Social Security number, or other information pertaining to a financial transaction such as account number, payment history, credit and debit card purchases.

Commercial grade encryption includes AES (128-bits and higher), TDES (minimum double-length keys), RSA (2048 bits and higher), ECC (160 bits and higher) and ElGamal (1024 bits and higher).
